In the spreadsheet, cell D2 contains the formula $0.005^{*} \mathrm{~B} 2$, cell E 2 contains the formula $\mathrm{C} 2-\mathrm{D} 2$, cell F 2 contains the formula B2-E2, and cell B3 contains the formula F2. These cells are copied down to 12 months.
b) A final payment of $\$ 88.88$ overpays the loan by $\$ 34.71$ and so the final payment is $\$ 88.88-\$ 34.71=\$ 54.17$.
c) Highlight the balance column, and from the Insert menu, select Chart. From this menu, select line graph.
6. Answers may vary.
7. Use the TI-83 Plus: randInt(1, 50); use a spreadsheet function such as $\operatorname{INT}(\operatorname{RAND}() * 51)$; write the integers from 1 to 50 on equal-sized slips of paper and draw slips at random from a hat, replacing the slip after each draw.
8. b) 4 colours
9. a) No; more than two vertices have an odd degree.

g) Frequency polygon: shows the changes in frequency from one interval to the next. Relative frequency polygon: shows the changes in frequency relative to the total number of scores. Cumulative frequency: shows the rate of change of frequency from one interval to the next and the total number of scores.
